EMBRYONIC STEM CELLS/INDUCED PLURIPOTENT STEM CELLS  
Concise Review: Induced Pluripotent Stem Cell-Based Drug Discovery for Mitochondrial Disease

Gizem Inak, Carmen Lorenz, Pawel Lisowski, Annika Zink, Barbara Mlody, Alessandro Prigione

First Published: 22 May 2017 Vol: 35, 1655-1662 | DOI: 10.1002/stem.2637

Abstract | **Full Text (HTML)** | **PDF (381.4KB)** | References

Once induced pluripotent stem cells (iPSCs) have been derived from mitochondrial patients, isogenic controls can be generated using genome editing technologies. Correcting the mutations is, however, currently very challenging in the case of mtDNA. The choice of an effective neural cell model is critical for enabling the establishment of high-throughput compound screenings. The screenings can be developed based on targets that

are already known or on cellular phenotypes that are identified using the iPSC-derived neural cells. After the screenings, several validation steps using various methods and model systems are necessary before being able to propose any compound as a treatment, leading to a personalized strategy for drug discovery of neurological mitochondrial disease.

10<sup>4</sup> live CD117+ per fetus at a gestational age of 13-14 days (E13-E14; term E21) [1].

An increasing number of publications describe AFSC isolation using culture conditions alone (no CD117 selection at any stage). In the majority of these studies, amniocytes are plated in tissue culture-treated dishes in high-serum media (DMEM, with 10%-20% FBS, with or without basic fibroblast growth factor/FGF-2) [29], and cells have largely mesodermal potential (i.e., they can generate adipogenic, chondrogenic, osteogenic, and myogenic lineages; likely to be AFMSC) [11, 30], although some authors have reported multi-lineage differentiation potential not restricted to mesoderm (including neural differentiation, as well as embryoid body formation) [31-35]. In other cases, it has been observed that cells with similar potentials to AFSC can be derived using precise culture methodology but without positive selection [25, 27]. AFSC, derived by positive selection or by expansion conditions, have a cellular phenotype that is between ESCs and adult mesenchymal stem cells (MSC; see Cellular Characteristics and Fig. 1 below) [17]; this is in contrast to other amniotic fluid-derived cells with a purely mesenchymal phenotype [29], with obvious implications regarding potential regenerative medicine applications. For the rest of the present review, we will focus our discussion on CD117+ AFSC only.

### Myeloma Propagating Cells, Drug Resistance and Relapse

**ABSTRACT**

Multiple myeloma (MM) is an incurable tumor of the plasma cells, the terminally differentiated immunoglobulin secreting B lineage cells. The genetic make-up of MM has been extensively characterized but its impact on the biology of the disease is incomplete without more precise knowledge of the identity and functional role of cells with multiple myeloma propagating activity (MMPA). We review here recent data that link MMPA with myeloma clonotypic populations organized in a cellular hierarchy that mirrors normal B cell development and also with drug resistance and disease relapse. We further propose a conceptual framework which, with optimal use of recent technological advances in genomics and phenomics, could allow dissection of the cellular and molecular properties of cells with MMPA, drug resistance and in vivo relapse in an integrated and patient-specific manner. There is real hope that these approaches will significantly contribute to further improvements in disease control, overall survival, and possibly cure of patients with MM. *STEM CELLS* 2015;33:3205-3211

**SIGNIFICANCE STATEMENT**

In this review article we attempt to provide an integrated view of the data that link multiple myeloma propagating cells (MMPA) with drug resistance and disease relapse. We also provide a blueprint for a tri-dimensional study of MMPA and drug resistance in myeloma patients i.e., diagnosis vs remission/relapse; bone marrow vs distant disease and within the cellular architecture of the tumour itself by utilizing the unprecedented power of the new high throughput technologies. It is hoped that such approaches will contribute in the more in-depth understanding of the mechanisms that sustain survival and growth of myeloma cells and will identify new therapeutic targets.

Efficient Derivation of Functional Human Airway Epithelium from Pluripotent Stem Cells via Temporal

Regulation of Wnt Signaling Original Research Article

*Cell Stem Cell*, Volume 20, Issue 6, 1 June 2017, Pages 844-857.e6

Katherine B. McCauley, Finn Hawkins, Maria Serra, Dylan C. Thomas, Anjali Jacob, Darrell N. Kotton

[Abstract](#) | [Graphical abstract](#) | [Research highlights](#) | PDF (4971 K) | [Supplementary content](#)

Kotton and colleagues show that carefully timed regulation of Wnt signaling can direct human pluripotent cells to differentiate rapidly into functional airway epithelial organoids with many potential applications in disease modeling, drug screening, and precision medicine, and for diseases such as cystic fibrosis.

Young Gie Chung, Shogo Matoba, Yuting Liu, Jin Hee Eum, Falong Lu, Wei Jiang, Jeoung Eun Lee, Vicken Sepilian, Kwang Yul Cha, Dong Ryul Lee, Yi Zhang

[Abstract](#) | [Graphical abstract](#) | [Research highlights](#) | PDF (2931 K) | [Supplementary content](#)

Zhang and colleagues show that, as they found previously in mouse, injection of a histone demethylase improves the efficiency of human SCNT reprogramming. Using this approach they were able to reduce variability in success from different egg donors and derive human NT-ESC lines from patients with age-related macular degeneration.

**Highlights**

- H3K9me3 is a barrier for human SCNT reprogramming as in mouse
- Injection of human KDM4A mRNA improves SCNT success in mouse oocytes
- KDM4A also improves human SCNT blastocyst formation and NT-ESC derivation
- H3K9me3 removal facilitates zygotic genome activation in human SCNT embryos

### Srpske knjige na Google books

Sekcija bibliotekara i knjižničara ZIS's library preduzela je inicijativu i postavila 60 srpskih knjiga u punom tekstu na Google books platformu. Najveći broj knjiga postavili su Institut tehničkih nauka SANU, Institut za filozofiju i društvenu teoriju i Etnografski institut SANU. Tendencije su da se projektu priključe svi naši instituti i Sekcija bibliotekara intenzivno, i sa entuzijazmom, radi na tome.

Čestitamo svim našim kolegama na uspešnoj realizaciji projekta:)

## Chapter 5: 'Creativity', 'Contemporary' and 'Integration'

### *Creativity*

To engage in a discussion of creativity with colleagues in music education is to embark on a slippery road indeed. Notions of self-expression, self-fulfilment, self-awareness; insistence on the necessity of being creative in today's society; suggestions that creative activities are the royal road to really understanding music; all these and many other claims are made for creativity. It is a fairly vague word. It is also an *approval* word. It is thought to be good to be creative or to promote creative activities, not so good to be non-creative, merely a performer or receiver of other people's creations. The issue is made all the more confusing by the use of the term 're-creative' to describe performance activities, a term which has some connection with recreation. Above all, creativity is a *vogue* word. One sees advertisements for creative salesmen, or creative holidays. A concert review once described a conductor as creative. Neville Cardus, in an obituary, was described as 'a creative critic'. Some people are called creative in a general way, others not. The term has crept into use in almost every area of life. At an international airport I picked up a book entitled *Creative Divorce!* I would say that a misunderstanding and misuse of this term can not only cause conceptual confusion but also lead to inadequate practice in teaching, and it is therefore very necessary to examine the term more carefully and, in a less emotive kind of way than is often the case.

I shall begin this examination by looking at some of the contributions made by psychologists to the creativity debate. We notice first the influential work of Carl Rogers who maintains that there is a great social need for creative individuals. According to Rogers (1970), our culture suffers from a 'death of creativity', as follows.<sup>1</sup>

Our formal education in schools and elsewhere tends to produce conformists, stereotypes, rather than 'original' people. In leisure-time activities, entertainment is received passively and often in large groups instead of being individually creative. In the sciences and in industry there are relatively few original people coming up with new ideas and hypotheses. Even in individual and family life we have a strong tendency to conform in dress, food, ideas and so on. Rogers insists that in our age knowledge is bounding along at an incredible speed, and as a consequence of this 'genuinely creative adaptation seems to represent the only possibility that man can keep abreast of the kaleidoscopic change in his world'. The consequences of failing to promote creativity, according to Rogers, are dire. 'Not only individual maladjustment and group tensions but international annihilation will be the price we pay for a lack of creativity.' Here then is the great *social* need for creative individuals. The successful evolution of mankind requires rapid change and adaptation in human attitudes, skills, knowledge and awareness. We need to proceed by creative leaps in order to cope successfully with the future. Other psychologists, especially Anthony Storr (1976), have argued that creative behaviour is also an answer to a *personal* need.<sup>2</sup> Storr's interesting thesis is that there is something 'intrinsically frustrating about human infancy'. As infants we want to do and be things we are just not able to achieve. We are, in many ways, at the mercy of parents and other people, often experiencing severe disturbance and anxiety through the frustrations created by constraints imposed on us by parents, society and our own immaturity, lack of skills, knowledge and the power to influence the world about us. As a result, we develop an inner world, a world of fantasies, trying to satisfy our desires and gratify the needs we have

## Indeksne baze

Indeksne baze podataka sadrže bibliografske podatke o radovima iz časopisa koji su u njima zastupljeni. Za svaki članak dati su detaljni podaci:

- autor rada i institucija
- naslov rada
- naziv časopisa
- godina
- jezik rada
- tip rada
- sažetak

Ukoliko zapis obuhvata i popis korišćene literature, takve baze nazivamo citatnim (Web of Science, Scopus, Srpski citatni indeks).

## Author search

[Compare sources](#) >

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

The Scopus Author Identifier assigns a unique number to groups of documents written by the same author via an algorithm that matches authorship based on a certain criteria. If a document cannot be confidently matched with an author identifier, it is grouped separately. In this case, you may see more than 1 entry for the same author. ✕

## Fizika

Fizika je prirodna nauka koja proučava materiju (njenu građu, njena svojstva, njeno kretanje), kao i zakonitosti po kojima se zbivaju pojave u prirodi. Dugo se zvala prirodna filozofija, po grčkoj reči *physikos*, što znači "prirodno". Spada u osnovne prirodne nauke koje proučavaju fundamentalna ili suštinska svojstva prirodnih tela i pojava. Fizika proučava sve aspekte prirode, uključujući i ponašanje objekata pod dejstvom sila, kao i prirodu i poreklo gravitacionog, elektromagnetnog i nuklearnog energetskog polja. Zadatak fizike je da formuliše sveobuhvatne principe koji povezuju i objašnjavaju sve raspoznatljive fenomene. Fizika se bavi širokim spektrom fenomena, od subatomske čestice do galaksija. U to spadaju najosnovniji objekti od kojih su sačinjeni svi ostali objekti i zato se za fiziku kaže da je fundamentalna nauka.

Fizika se bavi proučavanjem osnovnih svojstava, strukture i kretanja materije u prostoru i vremenu. Fizičke teorije se najčešće izražavaju kao matematičke relacije. Najutemeljenije pojave se nazivaju fizičkim zakonima i oni su, kao i sve druge naučne teorije, podložni promenama. Pri tome, novi fizički zakoni obično ne isključuju stare, nego samo ograničavaju domen njihovog važenja. Fizika je usko povezana sa drugim prirodnim naukama, posebno hemijom, koja se umnogome bazira na fizici, pogotovo na kvantnoj mehanici, termodinamici i elektromagnetizmu.

### Podela i osnovne oblasti fizike

Fizika se na osnovu načina na koji proučava tela i pojave deli na teorijsku i eksperimentalnu fiziku. Osnovne oblasti fizike su:

The image shows the WolframAlpha website interface. At the top, the WolframAlpha logo is displayed with the tagline "computational knowledge engine." Below the logo is a search bar with the prompt "Enter what you want to calculate or know about:". Underneath the search bar are several icons for different features: a keyboard icon, a play button icon, a list icon, and a share icon. To the right of these icons are three menu items: "Web Apps", "Examples", and "Random".

Below the search bar, there is a section titled "Explore some of the things Wolfram|Alpha can do:" followed by a grid of 20 category tiles. Each tile contains an icon and a category name:
